

BIOGRAPHICAL SKETCH

Provide the following information for the Senior/key personnel and other significant contributors.
Follow this format for each person. **DO NOT EXCEED FIVE PAGES.**

NAME: Brokamp, Cole

eRA COMMONS USER NAME (credential, e.g., agency login): brokampr

POSITION TITLE: Assistant Professor

EDUCATION/TRAINING (*Begin with baccalaureate or other initial professional education, such as nursing, include postdoctoral training and residency training if applicable. Add/delete rows as necessary.*)

INSTITUTION AND LOCATION	DEGREE (if applicable)	Completion Date MM/YYYY	FIELD OF STUDY
University of Cincinnati	B.S	06/2010	Biomedical Engineering
University of Cincinnati	Ph.D.	04/2016	Biostatistics and Bioinformatics
Cincinnati Children's Hospital Medical Center	Postdoctoral Research Fellow	10/2017	Biostatistics and Epidemiology

A. Personal Statement

I am an environmental and population health scientist trained at the intersection of biostatistics, epidemiology, and geoinformatics in order to advance precision public health. My work has focused on using GIS, machine learning, and causal inference methods with “big spatial data” to estimate the effect of spatiotemporal environmental exposures on neurobehavioral and psychiatric pediatric health outcomes. Specifically, my interest lies in the interaction of these urban exposures with individual- and community-level socioeconomic characteristics in order to identify subpopulations of children who are more susceptible to environmental health problems and inform targeted interventions.

In this project, I will serve as a co-Investigator and will utilize my expertise and experience in clinical machine learning prediction models to develop and implement an early warning system for units at CCHMC. Working with the other investigators, I will contribute to Aim 2 by developing time-series and machine learning models to identify possible interventions to reduce injury rates and also to predict injury rates specific to each unit and to the hospital overall. I will also work to integrate these models into an interactive heatmap dashboard and early notifications that will comprise the early-warning system developed in Aim 3. My experience in developing temporal and spatiotemporal machine learning prediction models will allow me to successfully collaborate as a part of this team and contribute to successful completion of the study aims.

B. Positions and Honors

Positions and Employment

2012–2016	Research Associate, Department of Environmental Health, University of Cincinnati
2016–2017	Research Fellow, Cincinnati Children's Hospital Medical Center Division of Biostatistics & Epidemiology
2017–	Assistant Professor of Pediatrics, the University of Cincinnati Department of Pediatrics and Cincinnati Children's Hospital Medical Center Division of Biostatistics & Epidemiology

Honors

2010	B.S. awarded with Distinguished Honors, University of Cincinnati
2016	CCHMC Division of Biostatistics & Epidemiology Travel Award
2016	CCHMC Arnold W. Strauss Fellowship Award
2017	CCHMC Epidemiology & Biostatistics Top Publication and Top Research Achievement

C. Contribution to Science

1. My early career has been spent developing exposure assessment models for spatialtemporal pollutants and community characteristics based on machine learning techniques. This work includes the first machine learning or ensemble model used to assess exposure to elemental components of particulate matter. Recent introduction of remote sensing satellite data has allowed for extension of the land use random forest model to produce daily estimates of air pollution back to 2000 at a resolution of 1 x 1 km.

2. Building on advanced exposure assessment models has allowed me to lead epidemiological studies on the impacts of the built environment (e.g., fine particulate matter, greenspace, combined sewer overflows, community deprivation) on several different pediatric health outcomes (e.g., psychiatric, neurobehavioral, gastrointestinal, and all-cause hospital utilization).

3. I have developed a novel approach and accompanying software package called DeGAUSS which overcomes the multiple privacy-related challenges in the use of address data in multi-site studies and also serves as a more general reproducible research tool for geocoding and geomarker assessment. This approach is currently being implemented in a wide variety of national environmental health studies. Extending this approach into a scalable and sustainable framework for automated integration of disparate and heterogeneous geomarkers via spatiotemporal location has reduced the need for manual data curation and specialized expertise required to utilize them within biomedical research studies.

 - b. **Cole Brokamp**. DeGAUSS: Decentralized Geomarker Assessment for Multi-Site Studies. *Journal of Open Source Software*. 2018.
4. I have also contributed to several studies on the disparities of health outcomes within children and the contribution of the place-based and social determinants of health to these disparities in order to identify root causes and meaningful solutions.

5. Lastly, I have contributed to a research team that has recently used functional data analysis combined with joint modeling (FD-JM) to identify and predict rapid decline in lung function among patients with cystic fibrosis (CF) lung disease. My work in translating this predictive model into an interactive application has allowed for patients and clinicians to take advantage of it at the bedside. Focus groups and partnerships with clinicians have allowed us to iteratively develop the application based on end-user feedback. Work

with the CF Foundation Patient Registry (CFFPR) to implement these models and visualizations into clinical settings has improved prognostic care.

D. Research Support

Ongoing Research Support

ECHO Opportunities and Infrastructure Fund Award

Decentralized and Reproducible Geomarker Assessment for Multi-Site Studies

Brokamp, PI (09/01/2019 - 08/31/2021)

This award will work towards building geospatial exposure assessment computing tools for utilizing high resolution spatiotemporal gridded datasets within ECHO.

Role: PI

NIH 5UG3OD023282-02

Children's Respiratory Research and Environment Workgroup (CREW)

Gern, PI (9/01/2016 - 8/31/2023)

This consortium will leverage a large (nearly 9000 births and long-term follow-up of 6000-7000 children and young adults) and diverse national data set, to harmonize data related to asthma clinical indicators and early life environmental exposures, develop standardized measures for prospective data collection, and conduct targeted enrollment of additional subjects into existing cohorts.

Role: Co-I

NIH/NHLBI R01HL141286-01A1

Mapping Environmental Contributions to Rapid Lung Disease Progression in Cystic Fibrosis

Szczesniak, PI (1/1/19 - 12/31/23)

The overall objective of this research is to leverage a rich CF registry, extant national and local environmental data sources, and prospectively collected study data to accurately forecast the onset of rapid decline progression.

Role: Co-I

NIH/NIA R21AG057983

A Novel Research Infrastructure Enabling Life-Course Studies of Healthy Aging

Woo/Urbina, PI (8/15/18 - 7/31/23)

The goal of this two-phase study is to develop the data and biospecimen infrastructure for the Bogalusa Heart Study, the Princeton Lipid Research Study and the NHLBI Growth and Health Study and to conduct pilot evaluations of the feasibility, acceptability and validity of data collected using a variety of biometric sensors relating to cardiometabolic risk, sleep quality and cognition.

Role: Co-I

NIH/NINDS R01 NS030678

Comparison of Hemorrhagic & Ischemic Stroke Among Blacks and Whites

Kleindorfer, PI (04/01/15 - 03/31/20)

Tracking of population-based stroke incidence in the Greater Cincinnati and Northern Kentucky region, with special emphasis on stroke in the young and stroke recurrence.

Role: Biostatistician

Recently Completed Research Support**Internal Processes and Methods Award - Center for Clinical & Translational Science & Training**

Using Machine Learning to Supplement Electronic Health Record databases with Individual Socioeconomic Status

Brokamp, PI (9/1/17 - 6/30/19)

Retrospective epidemiological studies are often created using electronic health record databases that lack individual level demographic data. We propose a novel machine learning based approach that uses open city and auditor databases to predict individual level income and family socioeconomic status.

Role: PI

Internal Arnold W. Strauss Fellowship Award - Cincinnati Children's Hospital

Assessing Exposure to Air Pollution Across Time and Space

Brokamp, PI (7/1/16 - 6/30/17)

The primary objective of this award is to combine satellite-based measurements, land use characteristics, and meteorologic data to create a hybrid spatiotemporal model for ground level exposure to particulate matter using exact addresses and dates.

Role: PI

Internal Processes and Methods Award - Center for Clinical & Translational Science & Training

Validating a Geocoding Approach for Multi Site Studies

Brokamp, PI (1/24/17 - 6/30/17)

The primary objective of this award is to compare the geocoding (assigning latitude and longitude coordinates to addresses) accuracy of our software DeGAUSS (DEcentralized Geomarker Assessment for mUlti Site Studies) to with other common geocoding software. Furthermore, each method will be evaluated based on its ability to correctly estimate environmental exposures and community-level characteristics.

Role: PI
