BIOGRAPHICAL SKETCH

Provide the following information for the Senior/key personnel and other significant contributors.
Follow this format for each person. **DO NOT EXCEED FIVE PAGES**.

NAME: Brokamp, Cole

eRA COMMONS USER NAME (credential, e.g., agency login): brokampr

POSITION TITLE: Assistant Professor

EDUCATION/TRAINING (*Begin with baccalaureate or other initial professional education, such as nursing, include postdoctoral training and residency training if applicable. Add/delete rows as necessary.*)

INSTITUTION AND LOCATION	DEGREE (*if applicable*)	Completion Date MM/YYYY	FIELD OF STUDY
University of Cincinnati	B.S	06/2010	Biomedical Engineering
University of Cincinnati	Ph.D.	04/2016	Biostatistics and Bioinformatics
Cincinnati Children's Hospital Medical Center	Postdoctoral Research Fellow	10/2017	Biostatistics and Epidemiology

A. Personal Statement

I am an environmental and population health scientist trained at the intersection of biostatistics, epidemiology, and geoinformatics in order to advance precision public health. My work has focused on using GIS, machine learning, and causal inference methods with "big spatial data" to estimate the effect of spatiotemporal environmental exposures on neurobehavioral and psychiatric pediatric health outcomes. Specifically, my interest lies in the interaction of these urban exposures with individual- and community-level socioeconomic characteristics in order to to identify subpopulations of children who are more susceptible to environmental health problems and inform targeted interventions. I am also the founding director of the Geospatial Research Accelerator for Precision Population Health (GRAPPH) at Cincinnati Children's Hospital Medical Center, a shared facility that works to develop and democratize geospatial data and methodologies across the institution.

I look forward to contributing as a consultant to Dr. Marusak's CURES pilot grant application, titled "Effects of air pollution on inflammation and regulation of anxiety in Detroit adolescents". My expertise and experience in developing spatiotemporal $PM_{2.5}$ exposure assessment models will help me contribute to accomplishing the scientific goals and help Dr. Marusak apply for the planned NIEHS grant application. Specifically, I will advise and assist in estimation of $PM_{2.5}$ levels, both cumulative lifetime exposures and more recent exposures based on participants' residential addresses.

B. Positions and Honors

Positions and Employment

2012–2016   Research Associate, Department of Environmental Health, University of Cincinnati
2016–2017   Research Fellow, Cincinnati Children's Hospital Medical Center Division of Biostatistics & Epidemiology
2017–   Assistant Professor of Pediatrics, the University of Cincinnati Department of Pediatrics and Cincinnati Children's Hospital Medical Center Division of Biostatistics & Epidemiology

Honors

2010   B.S. awarded with Distinguished Honors, University of Cincinnati
2016   CCHMC Division of Biostatistics & Epidemiology Travel Award
2016   CCHMC Arnold W. Strauss Fellowship Award
2017   CCHMC Epidemiology & Biostatistics Top Publication and Top Research Achievement
2020   CCHMC Epidemiology & Biostatistics Top Publication

C. Contribution to Science

1. My early career has been spent developing spatiotemporal exposure assessment models for enivronmental pollutants and community characteristics based on machine learning techniques. This work includes the first machine learning or ensemble model used to assess exposure to elemental components of particulate matter. Recent introduction of remote sensing satellite data has allowed for extension of the land use random forest model to produce daily estimates of air pollution back to 2000 at a resolution of 1 x 1 km.

2. Building on advanced exposure assessment models has allowed me to lead epidemiological studies on the impacts of the built environment (e.g., fine particulate matter, greenspace, combined sewer overflows, community deprivation) on several different pediatric health outcomes (e.g., psychiatric, neurobehavioral, gastrointestinal, and all-cause hospital utilization).

    d. **Cole Brokamp**, Andrew F. Beck, Louis Muglia, Patrick Ryan. Combined Sewer Overflow Events and Childhood Emergency Department Visits: A Case-Crossover Study. *Science of the Total Environment*. 607-608. 1180-1187. 2017.

3. I have developed a novel approach and accompanying software package called DeGAUSS which overcomes multiple privacy-related challenges in the use of address data in multi-site studies and also serves as a more general reproducible and scalable research tool for geocoding and geomarker assessment. This approach is currently being implemented in a wide variety of national environmental health studies. Extending this approach into a scalable and sustainable framework for automated integration of disparate and heterogeneous geomarkers via spatiotemporal location has reduced the need for manual data curation and specialized expertise required to utilize them within biomedical research studies.

    c. Lauren C. Riney, **Cole Brokamp**, Andrew F. Beck, Wendy Pomerantz, Hamilton Schwartz, Todd A. Florin. Emergency Medical Services Utilization is Associated with Community Deprivation in Children. *Prehospital Emergency Care*. 2018.

5. Lastly, I have contributed to a research team that has recently used functional data analysis combined with joint modeling (FD-JM) to identify and predict rapid decline in lung function among patients with cystic fibrosis (CF) lung disease. My work in translating this predictive model into an interactive application has allowed for patients and clinicians to take advantage of it at the bedside. Focus groups and partnerships with clinicians have allowed us to iteratively develop the application based on end-user feedback. Work with the CF Foundation Patient Registry (CFFPR) to implement these models and visualizations into clinical settings has improved prognostic care.

D. Additional Information: Research Support and/or Scholastic Performance

Ongoing Research Support

NIH/NLM 1R01LM013222-01A1
A Framework for Automated and Reproducible Geomarker Curation and Computation at Scale
Brokamp, PI (08/01/2020 – 07/31/2024)
This award will create a framework for developing a standardized, free and open source library of reproducible and computable geomarkers that will enhance the efficiency and collaboration of biomedical researchers utilizing place-based data at scale.
Role: PI

ECHO Opportunities and Infrastructure Fund Award
Decentralized and Reproducible Geomarker Assessment for Multi-Site Studies
Brokamp, PI (09/01/2019 - 08/31/2021)
This award will work towards building geospatial exposure assessment computing tools for utilizing high resolution spatiotemporal gridded datasets within ECHO.
Role: PI

ODH Contract No. CSP907820
Model Identifying Geographic Areas in Ohio for Blood Lead Testing
Brokamp, PI (04/01/2020 - 09/30/2020)
This award will develop a predictive model to determine which children should be tested for potentially high blood lead during physician visits based on their residential location.
Role: PI

NIH/NHLBI R01HL141286-01A1
Mapping Environmental Contributions to Rapid Lung Disease Progression in Cystic Fibrosis
Sczcesniak, PI (01/01/2019 - 12/31/2023)
The overall objective of this research is to leverage a rich CF registry, extant national and local environmental data sources, and prospectively collected study data to accurately forecast the onset of rapid decline progression.
Role: Co-I

Recently Completed Research Support

Internal Processes and Methods Award - Center for Clinical & Translational Science & Training
Using Machine Learning to Supplement Electronic Health Record databases with Individual Socioeconomic Status
Brokamp, PI (09/1/2017 - 06/30/2019)
Retrospective epidemiological studies are often created using electronic health record databases that lack individual level demographic data. We propose a novel machine learning based approach that uses open city and auditor databases to predict individual level income and family socioeconomic status.
Role: PI

Internal Arnold W. Strauss Fellowship Award - Cincinnati Children's Hospital
Assessing Exposure to Air Pollution Across Time and Space

Brokamp, PI (07/01/16 - 06/30/17)

The primary objective of this award is to combine satellite-based measurements, land use characteristics, and meteorologic data to create a hybrid spatiotemporal model for ground level exposure to particulate matter using exact addresses and dates.

Role: PI

Internal Processes and Methods Award - Center for Clinical & Translational Science & Training

Validating a Geocoding Approach for Multi Site Studies

Brokamp, PI (01/24/17 - 06/30/17)

The primary objective of this award is to compare the geocoding (assigning latitude and longitude coordinates to addresses) accuracy of our software DeGAUSS (DEcentralized Geomarker Assessment for mUlti Site Studies) to with other common geocoding software. Furthermore, each method will be evaluated based on it ability to correctly estimate environmental exposures and community-level characteristics.

Role: PI
